

## **Environmental Health and Safety Policy Statement**

The University of North Dakota strives to provide a safe and healthy environment for its students, faculty, staff and visitors. All members of the University community share in both the benefits and responsibility of maintaining and improving this environment.

The University subscribes to recognized standards of safety and health as defined in published materials from organizations such as North Dakota Workforce Safety and Insurance, state and federal fire codes, North Dakota Risk Management, the U.S. Department of Transportation, the Environmental Protection Agency, and the Occupational Safety and Health Act. Environmental Health and Safety has been assigned overall responsibility for administering the University's safety program.

Safety is a very high priority at the University of North Dakota, and administrators and supervisors are expected to support safety and health programs through employee motivation and action. Personnel at all levels are encouraged to acquire safety skills and training, report unsafe conditions, improve awareness and lead by example.

Through our cooperation and collective action, we can all share in creating the best possible environment in which the University of North Dakota can fulfill its missions and expectations.

A handwritten signature in blue ink, appearing to read 'A. Armacost', written over a horizontal line.
